```

Deploying icat3-logging:
icat3-logging should be added as a library to icat3-exposed.

ICAT Reporting

Jrxml files:
A jrxml directory can be created anywhere on the server. All jrxml files should be placed here*.

Properties files:
Reporting.properties- uk.icat3.reporting.client
- numberYears- for setting how many years appear in the list for parameters MONTH_FROM and MONTH_UNTIL

Images.properties (draft file is in icat3-reporting > docs)- glassfish > domains > domain1 > config
- logoLeft- path for image appearing in top left and bottom right of reports
- logoRight- path for image appearing in top right of reports
- *sourceFolder- path for folder containing jrxml files
- dbUsername- username for connecting to the logging database
- dbPassword- password for connecting to the logging database
- dbURL- url for connecting to the logging database

The following jar files should be added to glassfish > domains > domain1 > lib (they should be included with a jasperreports download):

- commons-beanutils
- commons-collections
- commons-digester
- commons-logging
- groovy-all
- iText
- jcommon
- jdt-compiler
- jfreechart
- jpa
- ojdbc

log4j.jar and jasperreports.jar should be added to icat3-reporting as libraries.

Deployment:

icat3-reporting can be deployed separately as a standalone war file.

Report parameters:

Name	Parameter	Type
LoginBarChartDay LoginsDay Downloads DownloadsByAge DatafileViewsByInstrument DatasetViewsByInstrument InvestigationViewsByInstrument	FROM UNTIL	Timestamp Timestamp
LoginBarChartMonth LoginsMonth DownloadsBySize	MONTH_FROM MONTH_UNTIL	Timestamp Timestamp
DownloadsForUser	FROM UNTIL USERID	Timestamp Timestamp String
DownloadsForInstrument	FROM UNTIL INSTRUMENT	Timestamp Timestamp String
